Paul A. Hayes

Objective

The goal of the technology education teacher is to encourage students in the acquisition of creative problem solving skills enabling the student to develop solutions to design problems in a hands-on environment. Using the latest advances in technology, engineering concepts, math and science, the technology program provides insight into the areas of physical, informational and biological systems showing their relationship to real world situations. A good technology education program not only focuses on the importance of cognitive learning, but also encourages learning in the affective and psychomotor domains. The program is designed to provide the students with the basic foundation necessary to build upon if they are to become productive citizens in an ever-changing world economy. Through the attainment of basic technological skills, knowledge and attitudes the students will become familiar with how to develop, produce, use and assess a solution using the universal systems model. This will require the students to work both independently as well as in a group setting integrating technology education with other disciplines of educational study.

Experience

1999–Present McGuffey School District Claysville, PA
